

INSIGHT qLABS 3

HAEMATOCRIT HCT AND TOTAL HAEMOGLOBIN

COAGULATION

The qLabs is an important tool to help diagnose conditions in relation to pre-operative checks for at risk animals, toxins and systemic diseases, hereditary bleeding disorders, excessive bleeding and disseminated intravascular coagulopathy (DIC).

The analyser requires only one drop (10µl) of whole blood directly from the syringe and provides excellent correlation to central laboratory results. The low-cost test strips, which combine PT/aPTT on one strip, do not require refrigeration, which increases practicality for veterinary practices.

Features

- Requires 1 drop of non-anticoagulated whole blood (10 µl)
- PT/aPTT tested simultaneously on 1 test strip
- Low cost analyser and consumables
- Room temperature test strip storage
- Fill test strip directly from syringe
- QC material available
- No need to transfer sample into citrate tube
- Option for Bluetooth docking station printer
- 'Test count up' for immediate assessment
- Excellent correlation to central laboratory results

Simple Test Procedure

- Insert test strip
- Apply a drop of blood
- Results displayed on LCD screen

Calibrated and validated specifically for use in cats and dogs

Cartridge Types:

PT/aPTT combo cartridge (12 & 24 pack)

Run 12 tests a month and the Qlabs is yours, FREE!
